# TRAFFIC & PARKING STUDY

# **FOR**

# 170 NORTH MAIN STREET

PROPOSED MIXED-USE DEVELOPMENT

BLOCK 301, LOT 1
BOROUGH OF WHARTON
MORRIS COUNTY, NEW JERSEY

OCTOBER 8, 2020

ELIZABETH DOLAN, P.E. NJ LICENSE NO. 37071

GARY W. DEAN, P.E., P.P. NJ LICENSE NO. 33722

#### Introduction

Dolan & Dean Consulting Engineers, LLC (D&D) has prepared this traffic and parking study for redevelopment of a property located on the east side of North Main Street in the Borough of Wharton, Morris County, New Jersey. The subject location is south of Ross Street and north of the North Main Street Extension.

According to the site and architectural plans, the new mixed-use development will include the following uses:

- ➤ 54 one-bedroom dwelling units
- ➤ 12 two-bedroom dwelling units
- ➤ 9 three-bedroom dwelling units
- Two restaurants totaling approximately 3,000 square feet
- > 7,819 square feet of retail space

Access is proposed via one right-in/right-out driveway on North Main Street, one full-movement driveway on Ross Street, and one full-movement driveway on the North Main Street Extension.

This report provides an assessment of the existing roadway infrastructure in the vicinity of the site, identification of projected trip generation and evaluation of the proposed on-site parking supply.

## **EXISTING CONDITIONS**

The subject property is designated as Block 301, Lot 1, located with frontage along North Main Street and Ross Street. To the south, the site is bordered by the North Main Street Extension, which is under construction. The subject property is currently developed with an industrial building.

North Main Street is designated as County Route 634 with a north-south orientation, and curving horizontal alignment. One lane is provided per each direction of travel and the speed limit is 25 miles per hour. On-street parking is not permitted. Sidewalks are present on both sides of the street.

Ross Street is a local east/west roadway that intersects North Main Street from the northeast. Ross Street is a dead-end roadway with STOP sign control on the approach to North Main Street.

The North Main Street Extension is a new roadway under construction on the southerly side of the site, which will intersect North Main Street and extend to East Dewey Avenue northeast of the site. Along the site frontage one lane per direction of travel will be provided. On the approach to North Main Street, separate left-turn and right-turn lanes are proposed.

### TRAFFIC CHARACTERISTICS OF THE PROPOSED USE

As noted, the new development will include approximately 7,800 square feet of commercial space, as well as approximately 3,000 square feet of restaurant space, in addition to 75 apartments. Although there are no specific restaurant tenants at this time, the applicant is anticipating a coffee/breakfast use and a second restaurant that will serve lunch and dinner. To estimate peak hour driveway volumes, reference is made to the 10<sup>th</sup> Edition of the <u>Trip Generation Manual</u> by the Institute of Transportation Engineers (ITE). The following ITE land use categories were specifically referenced:

- ➤ Land Use 932 High-Turnover (Sit-Down) Restaurant
- ➤ Land Use 936 Coffee/Donut Shop without Drive-Through
- ➤ Land Use 820 Shopping Center
- ➤ Land Use 220 Multifamily Residential (Mid-Rise)

Table I summarizes the total trip generation projections for each use, for the weekday morning and evening peak hours, and the Saturday midday peak hour.

TABLE I
TOTAL TRIP GENERATION PROJECTIONS

| Peak Hour | Land Use                   | Enter     | Exit      | Total            |  |
|-----------|----------------------------|-----------|-----------|------------------|--|
| Morning   | 1,500 SF Restaurant        | 8         | 7         | 15               |  |
|           | 1,500 SF Coffee/Donut Shop | 76        | 76        | 152              |  |
|           | 7,819 SF Retail            | 4         | 3         | 7                |  |
|           | 75 Apartments              | _7        | <u>20</u> | <u>27</u><br>201 |  |
|           | Total                      | 95        | 106       | 201              |  |
|           | 1,500 SF Restaurant        | 9         | 6         | 15               |  |
|           | 1,500 SF Coffee/Donut Shop | 27        | 27        | 54               |  |
| Evening   | 7,819 SF Retail            | 41        | 41        | 82               |  |
|           | 75 Apartments              | <u>21</u> | <u>13</u> | <u>34</u>        |  |
|           | Total                      | 98        | 87        | 185              |  |
|           | 1,500 SF Restaurant        | 9         | 8         | 17               |  |
| Saturday  | 1,500 SF Coffee/Donut Shop | 44        | 44        | 88               |  |
|           | 7,819 SF Retail            | 42        | 42        | 84               |  |
|           | 75 Apartments              | <u>19</u> | <u>19</u> | <u>38</u>        |  |
|           | Total                      | 114       | 113       | 227              |  |

The estimates shown in Table I take no credit for use of public transportation or for shared trips between the residential and commercial uses. In addition, as documented in the 3<sup>rd</sup> Edition of ITE's <u>Trip Generation Handbook</u>, many land uses draw traffic already on the adjacent roads in the form of pass-by trips. Based on ITE and in-house data, the following pass-by credits are applicable:

- ➤ 34% retail pass-by during the evening peak hour
- ➤ 26% retail pass-by during the Saturday peak hour
- ➤ 50% pass-by for the coffee/donut shop during all peak hours

When the pass-by credits are applied, the following new and pass-by trips are calculated:

Table II
Trip Generation By Use and Type

| Peak Hour | Trip Type | Enter           | Exit      | Total     |  |
|-----------|-----------|-----------------|-----------|-----------|--|
|           | New       | 57              | 68        | 125       |  |
| Morning   | Pass By   | <u>38</u>       | 38        | <u>76</u> |  |
|           | Total     | <u>38</u><br>95 | 106       | 201       |  |
| Evening   | New       | 71              | 60        | 130       |  |
|           | Pass By   | <u>27</u>       | <u>27</u> | <u>54</u> |  |
|           | Total     | 98              | 87        | 185       |  |
| Saturday  | New       | 81              | 80        | 161       |  |
|           | Pass By   | <u>33</u>       | <u>33</u> | <u>66</u> |  |
|           | Total     | 114             | 113       | 227       |  |

As previously described, the site will be served via three driveways which will allow traffic to be distributed in different directions without negatively impacting the North Main Street intersections with Ross Street or the North Main Street Extension. Trips to/from the northeast will be made via the driveway on the North Main Street Extension, with no impacts to North Main Street. Trips to/from the north will likely use the Ross Street intersection and trips to/from the south on North Main Street will use the new intersection.

#### **PARKING**

The following parking requirements are summarized on the site plan by Stewart Surveying and Engineering, LLC:

➤ 1 space/400 SF of commercial space
 ➤ 1 space/4 restaurant seats
 ➤ 1.8 spaces/1-bedroom unit
 ➤ 2.0 spaces/2-bedroom unit
 ➤ 2.1 spaces/3-bedroom unit
 7,819 SF/400 = 19.5 spaces
 54 x 1.8 = 97.2 spaces
 12 x 2.0 = 24 spaces
 ➤ 2.1 spaces/3-bedroom unit
 9 x 2.1 = 18.9 spaces

The overall requirement is 184 parking spaces, whereas the plan shows 167 parking spaces.

A shared parking analysis has been performed using data published in the 5<sup>th</sup> Edition of the <u>Parking Generation Manual</u> by the ITE. Appended to this report are the calculations showing the hour-by-hour parking demand for each of the proposed uses for both a weekday and Saturday. Using the parking requirements summarized on the site plan and the hour-by-hour ITE parking demands per land use, a maximum parking demand of 135 spaces is calculated for a weekday and a parking demand of 150 spaces is calculated for a Saturday.

Recognizing that residential parking demands peak overnight, when there is no commercial parking demand, the combination of uses can successfully share parking, with a calculated surplus of 17 spaces.
